SUMMARY

Driven Full-Stack Web Developer with a strong foundation in building scalable, production-ready web applications, real-time data systems, and interactive interfaces. Proficient across modern ecosystems, including Laravel/PHP, React, Next.js, and TypeScript. Adept at optimizing database performance, implementing secure authentication systems, and designing clean architectures that bridge seamless frontends with robust backend APIs.

TECHNICAL SKILLS

- Languages: PHP, JavaScript, TypeScript, HTML5, CSS3
- Frameworks & Libraries: Laravel, Vue.js, React, Next.js, Bootstrap, Tailwind CSS, Leaflet.js, CesiumJS
- Databases & Backend: MySQL, PostgreSQL, Supabase, phpMyAdmin, RESTful APIs
- Tools & Systems: Git, GitHub, Real-Time Systems, Role-Based Access Control (RBAC)

PROFESSIONAL EXPERIENCE

IT Technical Support Specialist | Al Andalus School

June 2026 – Present

- Manage critical IT infrastructure to ensure maximum network reliability and system uptime across the institution.
- Troubleshoot hardware, software, and configuration bottlenecks, providing rapid technical resolution for end-users.
- Administer system configurations and access controls to reinforce data security protocols.

Software Developer Intern | Mimar.Tech

July 2025 - October 2025

- Engineered a full-stack activity management system leveraging Laravel MVC architecture and a MySQL backend.
- Designed secure Role-Based Access Control (RBAC) permissions and data-validated CRUD operations.
- Built a responsive administrative dashboard utilizing dynamic tables, advanced filtering, and real-time UI updates.

PROJECTS

Real-Time Patient Dashboard — Next.js, TypeScript, Supabase

- Built a real-time data monitoring interface that streams live telemetry with instant UI state updates.
- Designed a modular architecture using state management to ensure scalable component rendering.

3D Satellite Animation & Virtual Tour System — CesiumJS, PHP, MySQL

- Engineered an interactive 3D visualization mapping platform featuring cinematic camera transitions and animation controls.
- Designed custom REST APIs to stream real-time JSON payloads, synchronizing 3D scenes with virtual navigation systems.

Public Reporting System — PHP, MySQL, Leaflet.js

- Developed location-based reporting platform with interactive mapping, real time user and dynamic filtering.
- Implemented secure data workflows and optimized queries for efficient large-dataset handling.

EDUCATION

Aug 2022 - Oct 2025

Bachelor of Computer Science (Software Engineering)

Multimedia University, Malaysia CGPA: 3.23/4.00

LANGUAGES

- Arabic (Native)
- English (Professional)
